**Specification**  
 Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur, USP).  
 Amount-of-substance concentration .0.1000 mol/l  
 The concentration of this volumetric solution was determined with volumetric standard Iron(II) ethylenediammonium sulfate (Merck article number 1.02402). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.003 (k=2 coverage factor for 95% coverage

probability). The certified value is traceable to primary standard NIST SRM 8040 (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Iron(II) ethylenediammonium sulfate measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.
