 Concentration after dilution to 1 liter: c(HNO<sub>3</sub>) = 0.1 mol/l  
 Amount-of-substance concentration .0.1000 mol/l  
 The concentration of this solution was determined with volumetric standard Tris(hydroxymethyl) aminomethane (Merck article number 1.02408).  
 The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability).

The certified value is traceable to primary standard NIST SRM 723e (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Tris(hydroxymethyl) aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

 Amount-of-substance concentration ....1.000 mol/l  
 The concentration of this solution was determined with volumetric standard Tris(hydroxymethyl) aminomethane (Merck article number 1.02408).  
 The determined titer at 20°C was 1.000 with an

expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability).  
 The certified value is traceable to primary standard NIST SRM 723e (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Tris(hydroxymethyl) aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

L-(+)-2,5-Diamino valeric acid hydrochloride

■ CAS-No. 3184-13-2 ■ EC-No. 221-678-6

■ Solub. in H<sub>2</sub>O 100 g/l (20 °C) ■ M = 168.62 g/mol ■ Melting point 245 °C ■ Bulk density 470 kg/m<sup>3</sup>

■ WGK nwg

■ LD50 oral rat 10000 mg/kg

■ LGK 10 - 13

■ HS-No. 2922 49 85 ■ Disposal 3

Soluble in water and mineral acids; insoluble in organic solvents.

### Specification

Concentration after dilution to 1 liter: c(C.H.O.) = 0.005 mol/l  
Amount-of-substance concentration .....0.005000 mol/l  
The concentration of this solution was determined with potassium permanganate solution (manufacture by Merck article number 1.09930)

standardized against volumetric standard di-sodium oxalate (Merck article number 1.02407). The expanded measurement uncertainty is ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 8040 (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard di-sodium oxalate measured

in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur, USP). Amount-of-substance concentration .0.1000 mol/l  
Water content (according to Karl Fischer) ..... 0.1 - 0.2 %

The concentration of this volumetric solution was determined with volumetric standard Tris(hydroxymethyl)aminomethane (Merck article number 1.02408). The determined titer at 20°C

was 1.000 with an expanded measurement uncertainty of ± 0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 723e (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Tris(hydroxymethyl)aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

Amount-of-substance concentration ..... 1/60 mol/l  
 The concentration of this solution was determined with sodium thiosulfate standard solution (Merck article number 1.09147) standardized against volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 136f

(NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

The concentration of this volumetric solution was determined with sodium thiosulfate standard solution (Merck article number 1.09147) standardized against volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of +/-0.003 (k=2 coverage factor for 95% coverage probability).

The certified value is traceable to primary standard NIST SRM 136f (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

**Specification**  
 Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur, JP). Amount-of-substance concentration . 0.1000 mol/l  
 The concentration of this volumetric solution was determined with hydrochloric acid standard solution (Merck article number 1.09060) standardized against volumetric standardTris(hydroxymethyl)aminomethane (Merck article number 1.02408). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of +/-0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 723c

(NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Tris(hydroxymethyl)aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

**Specification**

Concentration after dilution to 1 liter:  $c(\text{KIO}_3) = 1/60 \text{ mol/l}$

Amount-of-substance concentration ..... 1/60 mol/l  
The concentration of this solution was determined with sodium thiosulfate standard solution (Merck article number 1.09147) standardized against volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of  $\pm 0.004$  ( $k=2$  coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 136F

(NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

Amount-of-substance concentration 0.05000 mol/l

The concentration of this volumetric solution was

determined with volumetric standard sodium

chloride (Merck article number 1.02406). The

determined titer at 20°C was 1.000 with an

expanded measurement uncertainty of ± 0.003

(k=2 coverage factor for 95% coverage

probability). The certified value is traceable to

primary standard NIST SRM 999b (NIST: National

Institute of Standards and Technology, USA) by

means of volumetric standard sodium chloride,

measured in the accredited calibration laboratory of

Merck KGaA in accordance to DIN EN ISO/IEC

**Specification**  
 Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (USP).  
 Amount-of-substance concentration 0.05000 mol/l  
 The concentration of this volumetric solution was determined with iodine standard solution (Merck article number 1.09099) standardized by sodium thiosulfate against volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20°C was 1.000 with an

expanded measurement uncertainty of +/-0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 136f (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

### Specification

Concentration after dilution to 1 liter: c(Na<sub>2</sub>CO<sub>3</sub>) = 0.05 mol/l  
Amount-of-substance concentration .0500 mol/l  
The concentration of this solution was determined

with hydrochloric acid standard solution (Merck article number 1.09060) standardized against volumetric standard Tris(hydroxymethyl)aminomethane (Merck article number 1.02408). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 723e (NIST: National Institute of Standards and Technology, USA) by means of

volumetric standard Tris(hydroxymethyl)aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

## Specification

Volumetric solution in accordance to the chapter

reagents of the Pharmacopoeia (Ph Eur, USP). Amount-of-substance concentration 0.1000 mol/l. The concentration of this volumetric solution was determined with volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20 °C was 1.000 with an expanded measurement uncertainty of ± 0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 136f (NIST: National Institute of Standards and Technology, USA) by

means of volumetric standard potassium iodate measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

■ HS-No. 3505 10 90 ■ Disposal 3

This starch quality is degraded by acid hydrolysis to a mean molecular weight. It dissolves in hot water to form a clear 2% solution; turbidity occurs on cooling to room temperature.

## 101252 Starch soluble GR for analysis ISO

**Specification**  
Appearance (colour) ..... white  
Appearance (description) ..... fine powder  
pH-value (2 %; water) ..... 6.0 - 7.5

- Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur, USP). Amount-of-substance concentration . 0.1000 mol/l
- The concentration of this volumetric solution was determined with volumetric standard benzoic acid (Merck article number 1.02401). The determined

titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 350b (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard benzoic acid, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.
