### Specification

Amount-of-substance concentration . 0.1000 mol/l  
The concentration of this volumetric solution was determined with sodium thiosulfate standard solution (Merck article number 1.09147) standardized against volumetric standard potassium iodate (Merck article number 1.02404).  
The determined titer at 20°C was 1.000 with an

expanded measurement uncertainty of +/-0.004 (k=2 coverage factor for 95% coverage probability).  
The certified value is traceable to primary standard NIST SRM 136f (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

### Specification

Amount-of-substance concentration .....

.....0.004000 mol/l  
 The molar concentration of this volumetric solution is standardized against sodium dodecyl sulfate (catalog no. 1.12533). The determined titer is 1.000 at 20°C with a measurement uncertainty of ± 0.001. This titer is specific for the method, equipment and conditions of the titration laboratory of the Merck KGaA in Darmstadt. Note: The titer is a correction factor to correct variations of the volumetric solution, the titration

equipment, the temperature and other laboratory conditions. For exact titration results it is recommended to determine a titer with the laboratory specific equipment

**Specification**

Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (USP).  
 Amount-of-substance concentration 0.05000 mol/l  
 The concentration of this volumetric solution was determined with ammonium thiocyanate standard solution (Merck article number 1.09079) standardized by silver nitrate against volumetric

standard sodium chloride (Merck article number 1.02406). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 999b (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard sodium chloride, measured in the accredited calibration
