QUALITY

# Quality Doesn't Happen by Chance.

### Quality

We test and certify all products in-house for batch-to-batch consistency, using state-of-the-art technology and methods, complying with international standards and requirements. But quality to us is more. As our customer, you also deserve the highest quality service, from delivery and advice to packaging that fits your needs – around the globe. And that’s what we offer every day.

### Regulations

In this business you’re faced with many ever-changing rules that can be tough to navigate in. We help point the way.

We supply proven safety with an unrivaled range of specifications, with declarations to international standards such as ISO, ACS, and Reag. Ph Eur. That means customized quality, the highest possible reliability, worldwide availability – a combination that makes a real difference in your work.

### Accreditation

Our calibration labs are accredited to DIN EN ISO/IEC 17025. We strictly follow all international guidelines and have traceability to NIST and PTB standards. We also produce calibration standards for ICP and conductivity calibration to ISO Guide 34, making us a recognized producer of certified reference materials (CRM).

### Quality to Meet Your Needs

Our quality grades are designed around your needs, whether they involve international regulations, bulk and small quantities, or unique applications.

## Quality Grades

Trademark	Products	Use	Norms	Additional Merck classification
EMSURE®	Acids, caustics, salts, solvents	For analysis in highly demanding and regulated markets, e.g. Pharma QC	ACS, ISO, Reag. Ph Eur	Up to 70 specified parameters
EMPARTA®	Acids, solvents	For analysis in routine application and classical analysis	ACS	Up to 15 specified parameters
EMPLURA®	Solvents	Preparative laboratory work, cleaning purposes, chemical production		
extra pure	Acids, caustics, salts	For preparative lab applications, cleaning purposes, industrial production		
For Synthesis	Organic compounds	Chemical synthesis; industrial-technical applications		

## Special Solvent Grades/Instrumental Analysis

Trademark	Products	Use	Norms	Additional Merck classification
SeccoSolv®	Dried solvents	Analysis or synthesis of water-sensitive substances; DNA/RNA synthesis		
LiChrosolv®	HPLC solvents	Liquid analytical chromatography (UV, fluorescence, MS detection)	ACS, Reag. Ph Eur	
Prepsolv®	Solvents for chromatography	Preparative chromatography		
SupraSolv®	Solvents for gas chromatography	Gas chromatography: GC-ECD and FID; GC-MS; GC headspace	ICH	
UniSolv®	Solvents for trace analysis	Gas chromatography; GC-ECD, FID and MS		
Uvasol®	Spectroscopy solvents	UV/IR spectroscopy, fluorescence spectroscopy	ACS, Reag. Ph Eur	
MagniSolv™	Solvents deuterated	Nuclear magnetic resonance spectroscopy (NMR)		

## Special Inorganic Reagent Grades/Instrumental Analysis

Trademark	Products	Use	Norms	Additional Merck classification
Ultrapur	High-purity acids, hydrogen peroxide	Highly sophisticated instrumental trace analysis, e.g. ICP		Specified parameters in ppt range
Suprapur®	High-purity acids, bases and salts	Instrumental trace analysis, e.g. AAS		Specified parameters in ppb range
Apura®	Karl Fischer reagents	Titration according to Karl Fischer method		
Certipur®	Reference materials	Calibration of instruments for trace analysis or water determination	ISO Guide 34	Directly traceable to NIST standards
Titripur®	Volumetric solutions	Sophisticated titration	ACS, Reag. Ph Eur

SAFETY

# We're Dedicated to Your Safety!

## GHS – Hazard Pictograms and Examples for Associated Hazard Classes

Oxidizing liquids

Skin corrosion

Explosives

Flammable liquids

Skin irritation

CMR, STOT,  
aspiration hazardHazardous to the  
aquatic environment

Acute toxicity

Gases under pressure

Corrosive to metals

We're dedicated to keeping you, your lab, and the environment safe. We provide the information you need to be sure that you store, transport, handle, and dispose of substances safely. Safe packaging is also essential, and we provide the right substance in the right packaging. Environment- and user-friendly, our packaging fits with your processes and is tested to be safe over its entire life cycle.

### Be Sure about Compliance

We make it easy to comply with regulations such as GHS and REACH. The Globally Harmonized System (GHS) and the Regulation concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) work in different ways to promote safety. We help you stay compliant. Our reference materials are online, so you can find what you need quickly, and we post regular updates on any regulatory changes affecting you.

### GHS: A Common Language of Safety

GHS creates uniform worldwide requirements for classifying and labeling chemicals. Staying current with GHS is easy with Merck Millipore. You'll find every GHS update promptly included on our Safety Data Sheets and labels. We also offer GHS training webinars and a variety of printed materials on specific issues.

At the back of this catalog you'll see the new hazard and precautionary (H/P) statements compliant with GHS/CLP.

### REACH: Safety through Communication

Chemicals in amounts over one ton per year may only be produced in or imported into the EU if they are registered. This requires substantial data input – a big step toward greater transparency and safety.

At Merck Millipore, we are leveraging REACH into a business advantage for everyone in the supply chain. As we implement it, you'll have access to our complete portfolio.

# This Is How We Meet Your Safety Needs.

## Safety Data Sheets

We offer worldwide exhaustive Safety Data Sheets (SDS) in over 30 languages. They cover, e.g. melting point, boiling point and flash point, toxicity, health effects, first aid, reactivity, storage, disposal, protective equipment, and spill/leak procedures.

## Product Safety Summaries

Product Safety Summaries are user-friendly guides that detail safe handling and management of chemicals, and support the information given in the Safety Data Sheets, such as:

- ▶ Chemical Identity
- ▶ Uses and Application
- ▶ Physical/Chemical Properties
- ▶ Health Effects
- ▶ Environmental Effects
- ▶ Exposure
- ▶ Risk Management Recommendations
- ▶ Disposal Consideration
- ▶ Storage

## Storage

Extensive online Storage Guidelines let you be sure you properly store the products you use.

## Transportation

We comply with all domestic and international regulations while shipping dangerous goods by land, sea and air. On our Web site we offer you a summary of how the particular hazards posed by the substances must be identifiable.

## Disposal

We're committed to sustainable practices, even after our products are used. Our comprehensive, straightforward online disposal guidelines simplify proper disposal.

**StoreCard – Mixed storage of chemicals**

**When the recommendations for mixed storage of chemicals of identical or very different regulations for separate and separate storage must also be followed.**

**The mixed storage rule indicates whether a product in a particular storage class may be stored together with an additional one. Whether such mixed storage together is permitted depends on the hazard class of the additional product. The hazard class of the additional product is indicated by the hazard class of the additional product.**

**Separate storage:** The separate storage rule indicates whether a product in a particular storage class may be stored together with an additional one. Whether such separate storage together is permitted depends on the hazard class of the additional product. The hazard class of the additional product is indicated by the hazard class of the additional product.

**Segregated storage:** The segregated storage rule indicates whether a product in a particular storage class may be stored together with an additional one. Whether such segregated storage together is permitted depends on the hazard class of the additional product. The hazard class of the additional product is indicated by the hazard class of the additional product.

**Protection measures and rules of conduct:**

1. Safety instructions, which relate to the handling of chemicals, must be followed.
2. Chemicals must be stored strictly according to the compatibility plan.
3. The storage must also include preventive actions (e.g. spillage, safety, fire, etc.) in order to avoid the hazards of the chemicals.
4. There must be a clear labelling system (e.g. hazard labels, pictograms, etc.) in order to avoid confusion.
5. Storage must be carried out in a way that prevents damage to packaging and the escape of gases.
6. Storage must be carried out in a way that prevents damage to the environment (e.g. spillage, etc.).
7. Storage must be carried out in a way that prevents damage to the health of the personnel (e.g. spillage, etc.).
8. Storage must be carried out in a way that prevents damage to the environment (e.g. spillage, etc.).

## Examples for Product Safety Features

### Safebreak bottles

Merck has developed the Safebreak bottle, a solution that combines the stability benefits of glass with the safety benefits of PE. In case of a breakage any chemical content and glass splinters are reliably contained.

### SafetyCap

The SafetyCap is specially designed for products that generate excess pressure through chemical reactions.

### Hydrofluoric acid pouring aid

To prevent chemical burns we supply our hydrofluoric acid products in 500 ml bottles with an innovative and safe pouring aid, for drip-free pouring with drop-by-drop precision.

### Solvent withdrawal systems

For safe, no-spill, contamination-free withdrawal of chemicals.

### Safety carrier for bottles

For safe, easy transport with optimum bottle protection. Protect glass bottles and you.

# The Right Packaging for Your Requirements.

Good packaging is the finishing touch on a perfect product. That means effective protection, light, inert materials, zero risk of contamination, and less to dispose of.

Merck Millipore's safe, high-quality packaging protects you, your lab, and the environment throughout the product life cycle. Our strong track record in chemical packaging keeps you safe and makes sure the outstanding quality of our products stays that way. We offer a broad variety of pack sizes designed for your consumption levels and applications.

## The Right Materials

We use the appropriate materials in each case. For example, our HDPE packaging reduces costs for disposal (due to minimal packaging) and transportation (due to lower weight).

Just two out of a broad variety of pack sizes for your convenience.

## Passing the Test

We thoroughly test our packaging. Temperature load tests for glass bottles, fracture force tests for vials, impact resistance tests for cardboard – the list goes on. In fact, we're certified by the German Institute for Materials Research and Testing (BAM).

## Start Saving at the Source

Our solvents management system minimizes packaging waste. Our barrels and drums are inert to chemical contents, and their withdrawal systems and safety accessories keep solvents from posing a risk. Since minimal residual solvents are left after emptying, you have less waste overall to dispose of.

# Meeting Our Responsibility to You and the World.

## Responsibility at Merck Millipore

Merck Millipore is inspired by helping people live healthier lives. Fundamental to this is our commitment to corporate responsibility, fully aligned with our mission and values. In this sense we work with customers, partners, and employees to create responsible, innovative solutions for solving today's challenges. We constantly strive to offer you the highest quality products with sustainability features that help you achieve your goals.

Our approach is based on three key pillars: Inspired People, Streamlined Operations, and Future-Forward Products and Services.

## Inspired People

We foster a workplace culture where employees are encouraged to contribute ideas, build on their talents, conduct business with integrity, and give back to their communities, to continue to truly advance health and well-being worldwide.

## Streamlined Operations

We are capturing efficiencies and reducing our greenhouse gas emissions, water use, and waste while engaging suppliers in our pursuit to minimize the environmental impacts of our operations and supply chain. We fulfill our responsibility to the environment through our global EHS policy, Responsible Care® guiding principles, and Merck's group-wide environmental management system per ISO 14001.

### Future-Forward Products and Services

We use our ingenuity and passion to discover and develop new products that meet your needs by designing products and packaging with lower impacts, offering product stewardship solutions, and beginning to employ green chemistry.

### What Does it Mean for You?

It means helping you reduce energy and water consumption while using our solutions in your daily lab work. It means developing less or non-toxic chemicals and reagents, designed for safe and economic handling. It means providing for product reuse, recycling and safe disposal, and more sustainable packaging. Of course, during the entire process chain and life cycle of our products, safety and compliance with regulatory standards and requirements comes first.

Our reuse and recycling programs provide only some actions of how we address your sustainability challenges. These programs include, for example, the  $\text{ech}_2\text{o}^{\text{TM}}$  Collection and Recycling program for lab water purification cartridges, stainless steel returnable barrels, and drums for solvents, offered as the EMD ReCycler<sup>TM</sup> program in North America, both aimed at reuse of chemical containers and packaging.

Creating sustainable solutions requires collaboration. Hence, we want to closely interact with you to better meet your needs – also in future. We are looking forward to a lively dialog – for creating together. Please don't hesitate to contact us.

# There Is More to Safety than Meets the Eye

## Microbiological Testing Solutions by Merck Millipore.

We offer more than a complete range of high-quality microbiology testing solutions for the pharmaceutical, cosmetics, municipal water, beverages, and food industries. It's a comprehensive approach providing regulatory expertise, substantial service, and trust. For that one invaluable result: safe products. Our BioMonitoring solutions cover all monitoring and testing requirements in your industry.

### **Pharmaceutical: Experience Highest Quality Standards and Regulatory Compliance**

Effective quality assurance, constant quality control, and accurate results are key to manufacturing safe drugs. From sampling to final release, our complete solutions for environmental monitoring, traditional and rapid microbial detection, and sterility assurance help you meet the highest quality standards and regulatory demands.

### **Beverages: Benefit from Enhanced Safety, Improved Workflow and Earlier Product Release**

Our extensive range of ready-to-use and dehydrated culture media, our unique filtration and rapid microbial detection systems, as well as our complete range of environmental monitoring solutions ensure quick and reliable results when testing beverages or municipal water for quality and safety.

### **Food: Bank on Easy-to-Use, Reliable and Compliant Testing Solutions**

Trust our all-encompassing range of environmental monitoring products, truly convenient rapid microbial detection solutions, and highly consistent culture media, which are manufactured to the most stringent regulatory standards for maximum safety of your food products – and your brands.

# Merck Millipore Is the Partner of Choice for Water Purification Systems and Related Services.

Merck Millipore is a trusted partner of laboratories everywhere. We offer a broad range of pure and ultrapure water purification systems and services that are the choice of scientists working in pharmaceutical, clinical, academic, industrial, research, and government laboratories – in both validated and non validated environments.

## Specialized Product Portfolio

Lab Water experts take the time to evaluate the unique requirements of our customers' labs and applications. Based on this important information, they can then recommend the optimal Merck Millipore Lab Water solution tailored to each customer's water quality, volume, and distribution requirements.

## Our Innovative Product Line Includes:

### Milli-Q® Integral Ultrapure Water Purification Systems

- ▶ Dual POD (point-of-delivery) concept saves space and increases convenience
- ▶ Lower running costs and water waste with exclusive Elix® technology

## Elix® Advantage Water Purification Systems

- ▶ Unique EDI (electrodeionization) self-regenerated module
- ▶ Ergonomic E-POD® dispenser for easy delivery of pure water
- ▶ Lower running costs and water waste

## Watercare Pact Service Portfolio

- ▶ Certified field service engineers
- ▶ Tailor-made service plans
- ▶ Genuine spare parts

### This Legend Guides You Through Both Our Product Information and Our Labels

Naturally, how much you order is dictated by your needs. But in many cases, we offer two different package units: single packages and box packages. Box packages are priced more competitively than single packages. You can

benefit from these quantity prices by ordering box quantities or multiples thereof. So your order might look like this: 6 x 1 l, 12 x 1 l, or 18 x 1 l. When placing your order, please be sure to quote the full order number with the total amount you want. A sample order looks like this: 1.00003.1000 6x 1l.

No.	Meaning	Description	More details
1	Item name		
2	Catalog number	Six-digit Merck catalog number	
3	Order number	Ten-digit Merck order number. The last four digits define the unit quantity.	
4	Grade/Application information		See Quality
5	Synonyms and abbreviations		
6	Structural formula	The structure of chiral products is given in the form of stereo formulas.	
7	CAS number	The internationally valid CAS (Chemical Abstracts Service) number is allocated to chemical substances by Chemical Abstracts Services based in Columbus, Ohio (US).	See the index list of CAS numbers
8	Empirical formulas		See the index list of empirical formulas
9	Molar mass		
10	Density		
11	Physical and chemical data		
12	Toxicological data		
13	WGK German classification of water pollution risk	nwg Non-water-polluting 1 Slightly water-polluting substances 2 Water-polluting substances 3 Highly water-polluting substances	
14	Hazardous properties		
15	H (hazard) and P (precautionary) statements		See H & P statements
16	Signal word		
17	R (risk) and S (safety) phrases		
18	Hazard pictograms		See Safety
19	EC index number	This is the index number of products mentioned in Appendix I of the Regulation 67/548/EC (a list of dangerous materials and preparations according to paragraph 4a of the Dangerous Goods Regulation).	
20	Disposal advice		See Disposal of Reagents and Chemical Waste
21	EC number	The EC number of a registered chemical substance is issued by the EC Commission.	
22	Transportation data		See Dangerous Goods Transport
23	Storage class (LGK)		See Safe Storage
24	HS code	This code is for the harmonized system of labeling and coding goods in international trade. Example: 1234 56 78, first six digits: HS international, last two digits: EU country-specific	
25	Product specifications	The quality of our reagents and chemicals is documented by the specifications, trademarks, or certificates of guarantee. Exhaustive functional tests play a key role in quality assurance.	
26	Content of one package		
27	Number of single packs		
28	Packaging material		See Packaging
29	RTECS		
30	EAN 13 bar code		
31	NFPA label	It indicates flammability, health, and reactivity based on categories NFPA developed. These categories are contradictory to US GHS and as such OSHA stated they cannot appear on a commercial label.	

# Find Your Way without Asking.

No matter what kind of information you start with, this catalog will help you find exactly what you want – and quickly! Search by special product categories, the A – Z alphabetical listing, or the index.

## Special Product Categories

Explore broad product ranges for various applications. These categories allow you to search within your specific application, such as Chromatography, Inorganic Reagents, Lab Water, or BioMonitoring.

## Alphabetical Listing

The A to Z product listing spans over 10,500 separate products and includes special features to make your search easier:

### Product Groups

Example: Nitrates. Beneath the individual product group named nitrates, you'll find a list of all nitrate products within the catalog, complete with individual information and a cross-reference to those products' pages. What's more, you can search at higher group levels, such as sulfur compounds. This allows you to pinpoint single products within subgroups, such as sulfides and disulfides, mercaptanes, and sulfonic acid and its derivatives.

## Cross-References in Case of Product Synonyms

Example: "DMSO" acronym. The DMSO entry lists the cross-reference to the page containing dimethyl sulfoxide product information.

## A – Z Arrangement Adhering to IUPAC Rules

Example: N,N-Dimethylethylenediamine found under "D." The first letter of the product name determines the alphabetical order.

## Short Code at the Top of Each Page

Example: Magnes. The first six letters of the first product are listed on the individual page. This helps you find your product by alphabetical order.

## Index

You can refer to our index using four distinct pieces of information:

- ▶ Empirical formulas or Hill formulas, such as  $C_2H_3N$  (acetonitrile)
- ▶ CAS registry numbers, such as 75-05-8 (acetonitrile)
- ▶ Merck catalog numbers, such as 100030 (acetonitrile, gradient grade for liquid chromatography LiChrosolv® Reag. Ph Eur)
- ▶ Keywords, such as "Solvents," for liquid chromatography (acetonitrile)

# Leading the Way for over a Century.

For over a century, we've been driving innovation in every aspect of analytical chromatography. Our latest milestones include launching monolithic Chromolith® HPLC columns, the SeQuant® ZIC®-HILIC technology, Purospher® STAR UHPLC columns, and HPTLC-MS Thin-Layer plates. So no matter what your requirements are, our products will lead you to your goal.

# Take Your Lab to the Sample – Spectroquant® Move 100 Mobile Colorimeter.

Spectroquant® Move 100 is a portable colorimeter with over 100 pre-programmed and 35 user-defined tests. Together with our Spectroquant® test kits, Quality Certificate documentation and Spectroquant® Verification Standard, it's all you need for rapid, reliable water analysis on the spot. The Data Transfer module even transmits your results to your PC or printer.

# Innovative Microbial Testing Solutions for Pharmaceuticals, Food and Beverages.

Bringing together the expertise of recently integrated market leaders, Merck Millipore reaches beyond its complete range of testing and monitoring products. Its regulatory and technological expertise and profound understanding of manufacturers' needs provide you with comprehensive solutions you can trust for maximum product safety.

Cat.No.	Designation	Transport	Ord.No.	Quantity	Price
115112	Anaerotest® for microbiology	■ Store at +15°C to +25°C.	1.15112.0001	50 strips	<a href="#">inquire</a>
110649	Bacillus subtilis (BGA) spore suspension for inhibitor test	■ LGK 10 - 13 ■ Store at +2°C to +8°C.	1.10649.0001	15x2ml amp	<a href="#">inquire</a>
113301	Bactident® Aminopeptidase 50 test strips for the detection of L-alanine aminopeptidase in microorganisms	■ Store at +2°C to +8°C.	1.13301.0001	50 strips	<a href="#">inquire</a>
113306	Bactident® Coagulase Rabbit plasma with EDTA, lyophilized	■ LGK 10 - 13 ■ Store at +2°C to +8°C.	1.13306.0001	6 x 3 ml	<a href="#">inquire</a>
113303	Bactident® E. coli rapid identification kit for E. coli	 ■ GHS: Danger  ■ LGK 3 ■ Store at +2°C to +8°C.	1.13303.0001	50 tests	<a href="#">inquire</a>
113300	Bactident® Oxidase for the detection of cytochrome oxidase in microorganisms	■ Store at +2°C to +8°C.	1.13300.0001	50 strips	<a href="#">inquire</a>
144107	Blank Strip Kit, Agar Strips 941605 HYCON®	■ LGK 10 - 13 ■ Store at +15°C to +25°C.	1.44107.0050	50 units	<a href="#">inquire</a>
144024	Blank Strip Kit, Contact Slides 931200 HYCON®	■ LGK 10 - 13 ■ Store at +15°C to +25°C.	1.44024.0020	20 units	<a href="#">inquire</a>
146525	Bottle Rack 6 x 1000ml	■ LGK 10 - 13	1.46525.0001	1 PC	<a href="#">inquire</a>
146526	Bottle Rack 15 x 100ml	■ LGK 10 - 13	1.46526.0001	1 PC	<a href="#">inquire</a>
111351	Catalase Reagent for the detection of catalase in microorganisms Hydrogen peroxide 3% Bactident®	■ LGK 10 - 13 ■ Store at +2°C to +8°C.	1.11351.0001	1 x 30 ml	<a href="#">inquire</a>
144111	Cover Slides 941900 HYCON®	■ LGK 10 - 13 ■ Store at +15°C to +25°C.	1.44111.0100	100 units	<a href="#">inquire</a>
115533	CULTURA mini incubator (115 V) for microbiology		1.15533.0001	1 unit	<a href="#">inquire</a>
113311	CULTURA mini incubator (230 V) for microbiology	■ Store at +15°C to +25°C.	1.13311.0001	1 unit	<a href="#">inquire</a>
111499	Geobacillus stearothermophilus Spore Suspension for the antibiotic sulfonamide residue test acc. to KUNDRAT	■ LGK 10 - 13 ■ Store at +2°C to +8°C.	1.11499.0001	5 x 2 ml	<a href="#">inquire</a>
109023	GRIESS-ILOSVAY'S nitrite reagent for microbiology	 ■ GHS: Danger, Skin corrosion, Category 1B, H314 ■ LGK 8 B ■ Store at +15°C to +25°C.	1.09023.0500	500 ml	<a href="#">inquire</a>
144249	Incubation Rack for Agar Strips 940941	■ LGK 10 - 13	1.44249.0001	1 unit	<a href="#">inquire</a>
144250	Incubation Rack for Contact Slides 940946	■ LGK 10 - 13	1.44250.0001	1 unit	<a href="#">inquire</a>
111350	Indole KOVÁCS Indol reagent Bactident®	 ■ GHS: Danger, Flammable liquid, Category 3, H226; Corrosive to metals, Category 1, H290; Acute toxicity, Category 4, Oral, H302; Skin irritation, Category 2, H315; Serious eye damage, Category 1, H318; Specific target organ toxicity - single exposure, Category 3,  ■ LGK 3 ■ Store at +2°C to +8°C. 	1.11350.0001	1 x 30 ml	<a href="#">inquire</a>
109293	KOVACS' indole reagent for microbiology	 ■ GHS: Danger, Flammable liquid, Category 3, H226; Corrosive to metals, Category 1, H290; Acute toxicity, Category 4, Oral, H302; Skin irritation, Category 2, H315; Serious eye damage, Category 1, H318; Specific target organ toxicity - single exposure, Category 3,  ■ LGK 3 ■ Store at +2°C to +8°C. 	1.09293.0100	100 ml	<a href="#">inquire</a>

# Inorganic Reagents – Perfection in Every Dimension.

Our reagents for instrumental analysis are produced from high-purity materials and analyzed using the most sophisticated methods. Choose from our broad range of reagents, such as Certipur® standards and reference materials, Apura® Karl Fisher reagents and standards, Suprapur® and Ultrapur high-purity acids and salts, and Titripur® volumetric solutions. And achieve the most reliable results.

# Laboratory Water Purification Solutions

Merck Millipore offers a broad range of pure and ultrapure **water purification systems and services** designed for scientists working in pharmaceutical, clinical, academic, industrial, research, and government laboratories – in both validated and non-validated environments.

We offer complete solutions designed to meet your laboratory water needs. Our Lab Water experts will take the time required to evaluate your unique situation and to propose the best-adapted solution.

In the following pages you will see why an appropriate laboratory water installation is key to the success of your laboratory experiments and also discover some of the water purification solutions that we propose.

Please do not hesitate to contact us for technical advice or additional technical information and brochures. You will also find useful information on our website:

# The Importance of Water Purification in Laboratory Applications

## Water: the Most Commonly Used Reagent

Nearly all labs use a common reagent in their work: high purity water. Because it is so ubiquitous, water can have a profound effect on practically every phase of life science and analytical research. Purification of water used in the lab is therefore crucial.

### Use of high purity water in analytical chemistry

In **analytical chemistry**, sample preparation often requires the use of high purity water. Whether for **inorganic analysis** (involving instruments for atomic absorption, ICP, ICP-Mass Spectrometry, ion chromatography or titrators), or **organic analysis** (instruments for UHPLC, HPLC, GC and mass spectrometry hyphenated techniques), sample preparation is a significant step in the analytical procedure. In preparing samples, it is important to guard against contamination that can occur due to poor-quality procedures, use of inadequate water quality, or improper rinsing of containers and filters.

High purity water is also required in the **analysis itself**. Most methods require running a blank and diluting standards in order to calibrate the instruments before dosing any substances. In HPLC, high purity solvents will optimize analytical results, column performance and instrument fluidics. The benefits of using particulate-free high purity water include increased column lifetime, no artifact peaks, superior resolution and sensitivity, and separation reproducibility. This water also prevents damage to pumps and injectors, as well as plugging of column and frits, which causes an increase in back pressure.

### Use of high purity water in life sciences

In life science research, the presence of bacteria by-products or the bacteria themselves, can impact experiments significantly.

In the **genomics field**, nuclease-free water is required in order to prevent sample degradation and maintain integrity of the RNA and DNA collected and studied. Now, newer ultrafiltration techniques also provide scientists with nuclease-free water, providing an alternative to time-consuming, cumbersome DEPC-treatment, which adds ionic and organic contamination to the treated water.

In **protein research**, where it is crucial to prevent degradation or contamination of

the protein sample, freshly-produced, high resistivity, low organic content, protease-free and bacteria-free water is required. In protein separation with 2D-PAGE or nano-LC, for example, reagent quality (including that of the high purity water) is determinant. For the protein or peptide analysis steps that use MALDI-

ToF-MS or MS/MS, extremely pure reagents are also required in order to avoid pollution of the mass spectrometer ionization chambers, as well as interferences in the mass analysis.

In **cell culture** and **cell biology experiments**, the use of endotoxin-free media is a prerequisite. Although laboratories systematically select high quality reagent powder to reconstitute media, often the same care is not taken in the selection of the right quality water.

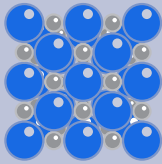

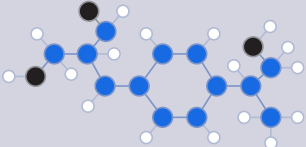

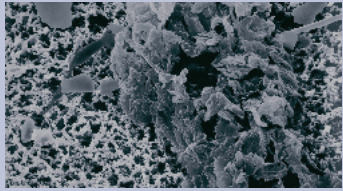

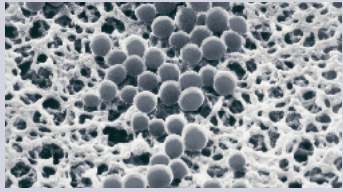

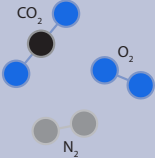

Endotoxin-free water is a key factor in the preparation of endotoxin-free media. Such water can be obtained from a water purification system specifically designed for this purpose – such as the Merck Millipore Milli-Q® Integral or Milli-Q® Advantage A10® ultrapure water systems, when equipped with an ultrafiltration cartridge (BioPak® filter) at the point of use.

# How Water Contaminants Impact Test Results

Five major classes of water contaminants are present in both natural and tap water:

Contaminant	Components	Effect	
<b>Inorganic Ions</b>	<ul style="list-style-type: none"> <li>– Cations: sodium, calcium, magnesium, iron</li> <li>– Anions: bicarbonate, chloride, sulfate</li> </ul>	Can affect organic and biochemical reactions; can interact with ion or metal analyses.	
<b>Organics</b>	<ul style="list-style-type: none"> <li>– Dissolved organic molecules in tap water are of biological origin (plant decay releases humic/fluvic acids, tannins and lignin); and of manmade origin (agricultural, industrial and consumer activities).</li> <li>– Man-made contaminants, such as phthalate esters, can leach into water from PVC pipes.</li> </ul>	<ul style="list-style-type: none"> <li>– Can affect biological experiments (cell culture) and disturb analytical techniques.</li> <li>– In water used in Liquid Chromatography eluents, contaminants can cause baseline instability, decrease sensitivity and resolution and reduce column lifetime.</li> </ul>	
<b>Particulates and Colloids</b>	<ul style="list-style-type: none"> <li>Soft Particulates: vegetal debris</li> <li>Hard Particulates: sand, rock</li> <li>Colloids</li> </ul>	Can interfere with instrument operation.	
<b>Bacteria and Their By-Products</b>	Live microorganisms in tap water (Harmful bacteria are removed by the chlorination process).	Can cause issues themselves or through their by-products (pyrogens, nucleases, alkaline phosphatase).	
<b>Gases</b>	Natural water contains dissolved gases (nitrogen, oxygen, carbon dioxide)	Oxygen can affect specific biochemical reactions; nitrogen can form bubbles that are detrimental to particulate counting or spectrophotometric measurements.	

## Monitoring of water contaminants

Two classes of contaminants, inorganic salts and dissolved organics, are known to affect most laboratory experiments, and it is therefore important to monitor them online in laboratory water systems.

Merck Millipore takes these needs into consideration, and offers water purification systems that allow advanced water quality monitoring with high precision resistivity monitors for sensitive ionic detection, and Total Oxidizable Carbon (TOC) meters for prevention of organic breakthrough.

# Overview of Water Purification Technologies

Several purification technologies are commonly used to remove and control the level of contaminants in water. No one technology can remove 100% of the five classes of contaminants. Therefore, Merck Millipore water purification systems utilize a combination of technologies to produce pure and ultrapure water.

## 1. Pretreatment step: pure water purification

The pure water purification step removes the bulk of the contaminants originally present in water to produce water with quality superior to double distilled water. It involves three major technologies: reverse osmosis, electrodeionization, and irradiation with germicidal UV.

### Reverse Osmosis (RO)

Reverse osmosis constitutes an excellent first purification step because it has the ability to remove a fair percentage of the major classes of contaminants present in potable tap water. RO will typically remove more than 97% of the ions, more than 99% of organics with molecular weight above 200 Dalton and more than 99% of the colloids, particulates and bacteria. The RO membrane being sensitive to particulates, chlorine and CaCO<sub>3</sub> deposits, an adequate protection is provided by the Progard® cartridge located upstream of the RO membrane.

### Electrodeionization (EDI)

The RO purification step is followed by the Elix® module, an electrodeionization (EDI) patented device combining electrodes, selective anionic and cationic permeable membranes, and ion-exchange resins. The ion-exchange resin beads in the EDI module are permanently regenerated by a weak electric current, enabling its operation for several years without any maintenance. The Elix® module is able to remove most of the remaining inorganic and organic ions from the RO permeate.

The combination of RO and EDI is a very powerful pretreatment. It provides Type 2 water on a consistent and reliable basis, with water resistivity > 5 MΩ·cm (typically 10–15 MΩ·cm) and TOC < 30 ppb (measured online).

### Germicidal UV

A low pressure mercury lamp, emitting light at 254 nm wavelength, placed at the Elix® module outlet, inactivates microorganisms and prevents bacterial growth and contamination in the pure water produced, just before storage in the reservoir. An optional programmable 254 nm UV lamp in the reservoir maintains low bacterial contamination in the stored pure water and prevents biofilm development.

## 2. Polishing step: ultrapure water production

Pure water momentarily stored in an adequately designed reservoir can be used directly for the glassware washing process, or further purified for critical chromatography applications. Polishing steps typically combine three purification technologies: ion-exchange resins, activated carbon, and UV photooxidation, often followed by the use of a final filter at the point of water delivery, i.e. point of use.

### Ion-exchange resins

Ion-exchange resins are small (< 1.2 mm) polystyrene-based porous beads with ion-exchange binding sites covalently bound on the surface and inside the beads. Merck Millipore Jetpore® ion-exchange resins are characterized by high-binding capacity, fast ion-exchange kinetics to reach high resistivity and low TOC release. The purpose of the ion-exchange resins is to remove ions from the water, producing water with an 18.2 MΩ·cm resistivity.

### Synthetic activated carbon

The synthetic activated carbon is made of porous beads with a large developed surface (> 1,000 m<sup>2</sup>/g) and binds organic molecules to the pores by Van der Waals forces, π-π or hydrophobic interactions.

### UV photooxidation

A dual wavelength UV lamp (185 and 254 nm) oxidizes organics dissolved in water, so that they become electrically charged, and are afterwards removed by ion-exchange resins. This technology allows reduction of the organics to a TOC level below 5 ppb.

The combination of the three polishing technologies described above, ion-exchange resins, activated carbon, and UV photooxidation, yields water with high resistivity (18.2 MΩ·cm) and low TOC level (< 5 ppb).

Schematic of a water purification chain that delivers ultrapure water

### 3. Point-of-use cartridges

Finally a point-of-use (POU) cartridge can be placed at the end of the water purification chain, with two major purposes:

- Removing the contaminants most critical for the experimentation right before water is delivered and used.
- Preventing retro-contamination of the purification chain from airborne sources. The final purification cartridge is selected according to the requirements of the instruments or applications used in the laboratory.

Merck Millipore's range of Application Pak point-of-use cartridges includes the following:

## Laboratory Water Quality Types

Norms define different laboratory water grades for both technical and economical reasons. The purpose of these norms is to ensure that the right quality water is used for a specific application, while limiting laboratory operating costs – Type 1 water is more expensive to produce than Type 2 or Type 3 water. A careful selection of technologies is required to achieve the water quality needed.

### Type 3

Type 3 water is the lowest laboratory water grade, recommended for glassware rinsing, heating baths and filling autoclaves, or to feed Type 1 water systems.

### Type 2

Type 2 water is the grade used in general laboratory applications such as buffer and microbiological culture media preparation; as feed to Type 1 water systems, clinical analyzers, cell culture incubators and weatherometers; and for preparation of reagents for chemical analysis or synthesis.

### Type 1

Type 1 water is the grade required for critical laboratory applications such as mobile phase preparation for HPLC or IC; preparation of blanks, standard and sample dilution in HPLC,

IC, GC, AA, ICP-MS and other advanced analytical techniques; preparation of buffers and culture media for mammalian cell culture; production of reagents for molecular biology applications (DNA sequencing, PCR); and preparation of solutions for electrophoresis and blotting. Using Type 1 water for Type 2 water applications is a common laboratory practice in order to decrease the risk of artifact generation during experimental procedures.

### Laboratory Water Specifications

Different published norms define the quality required for specific laboratory water applications: ASTM and ISO® 3696 for laboratory applications; CLSI® guidelines for clinical laboratories. Some laboratories will also use norms defined in the European or the US Pharmacopoeia.

The table below gives minimum specifications for different water types.\*

Contaminant	Parameter and unit	Type 3	Type 2	Type 1
Ions	Resistivity (MΩ·cm)	> 0.05	> 1.0	> 18.0
Organics	TOC (ppb)	< 200	< 50	< 10
Pyrogens	EU/ml	NA	NA	< 0.03
Particulates	Particulates > 0.2 µm (units/ml)	NA	NA	< 1
Colloids	Silica (ppb)	< 1,000	< 100	< 10
Bacteria	Bacteria (cfu/ml)	< 1,000	< 100	< 1

\*These values are provided only as guidelines, as some specific laboratory applications may require a quality superior to the quality indicated by the norms.

## Overview of Merck Millipore's Water Purification System Portfolio

Merck Millipore's range of water purification systems is designed to provide laboratories with systems covering the three different water types in an efficient and economical way that includes adapted monitoring and quality assurance. The graph below shows a summary of the systems available,

and can be used as a starting point when selecting a lab water purification system. Merck Millipore application specialists are available at all stages of the lab water selection process to answer questions and ensure that system design best suits a specific laboratory's needs.

### Water Quality

In addition to our portfolio of water purification systems, Merck Millipore also offers a wide range of consumables and accessories for use with our equipment. Please visit our website for details.

# Merck Millipore Pure and Ultrapure Water Purification Systems

## Milli-Q® Integral Water Purification Systems

Integrated pure and ultrapure water at your fingertips

The Milli-Q® Integral is the most advanced ultrapure water purification system in the Merck Millipore portfolio. Producing from a few liters to a few hundred liters per day, this “2-in-1” system covers the needs of both pure and ultrapure water from tap water.

Milli-Q® Integral is a unique product combining the most advanced technologies, such as RO, patented Elix® EDI technology, UV, TOC monitoring, polishing cartridges and more.

Ergonomic Q-POD® (ultrapure) and E-POD® (pure) water dispensers provide optimized water dispense where you need it in the lab.

### Features

- Pure and ultrapure water is available directly from tap water from 60 l/day up to 350 l/day (depending on model).
- Consistent production of superior quality pure water without the need to regenerate a DI tank, thanks to patented Elix® technology.
- Easy pure or ultrapure water delivery in different lab locations thanks to the Q-POD® and E-POD® dispensers.
- Easy and intuitive operation.
- Application-specific water qualities through customized final polishers.
- Built-in resistivity and TOC monitors designed to comply with the most demanding norms, including USP requirements (§ 643 and § 645).
- System manager-specific interface with protection of key set points by a login and password.

### Applications

When the system is equipped with a 0.2 µm filter, the high purity water delivered by the system is suitable for HPLC, LC-MS, MALDI-ToF-MS, IC, ICP, AA and most of the analytical techniques commonly used in the laboratory. When an ultrafiltration cartridge (BioPak®) is utilized at the point-of-use, the water is suitable for genomics applications (quality at least

equivalent to DEPC-treated water) and cell culture. The water produced following the system’s pretreatment step may be used for regular laboratory needs, such as buffer and reagent preparation, microbiology media preparation, histology, dissolution testing (with UV detection) and rinsing of glassware.

## Milli-Q® Integral System Water Specifications

The Milli-Q® Integral system is designed to be fed by potable tap water as described in US-EPA, EP, and WHO norms.

### Ultrapure (Type 1) Water Quality

Milli-Q® water (sourced from a Q-POD® unit)

Parameter	Value	Unit
Resistivity	18.2	MΩ-cm @ 25 °C
TOC	< 5	ppb (µg/l)
Bacteria	< 0.1 (*)	cfu/ml
Particulates > 0.2 µm	< 1 (*)	Particulates/ml
Pyrogens (Endotoxins)	< 0.001 (**)	EU/ml
RNases	< 0.01 (**)	ng/ml
DNases	< 4 (**)	pg/µl

(\*) With Millipak® filter with Millipore Express® membrane or BioPak® filter as Application Pak  
 (\*\*) With BioPak® filter as Application Pak

The Milli-Q® Integral system is designed to produce ultrapure water in agreement with the quantitative specifications of Type I water as described in ISO® 3696, ASTM® D1193, and of EP and USP Purified Water, as well as the CLSI® – CLRW. A compliance report, with test details, is available upon request.

### Pure (Type 2) Water Quality

Elix® water (at Elix® module outlet)

Parameter	Value	Unit
Resistivity	> 5	MΩ-cm @ 25 °C
TOC	< 30	ppb (µg/l)

Note: if pure water is sourced from an E-POD®, the following water quality specifications are achieved:

Parameter	Value	Unit
Bacteria	< 0.1 (*)	cfu/ml
Particulates > 0.2 µm	< 1 (*)	Particulates/ml
Pyrogens (Endotoxins)	< 0.001 (**)	EU/ml
RNases	< 0.01 (**)	ng/ml
DNases	< 4 (**)	pg/µl

(\*) With Millipak® filter with Millipore Express® membrane or BioPak® filter as Application Pak  
 (\*\*) With BioPak® filter as Application Pak

Resistivity, TOC, and bacteria levels match the requirements of Type 2 water as described in ISO® 3696, ASTM® D1193 (Type II resistivity, TOC, heterotrophic bacteria count [HBC] Table I specification), and purified water as described in USP, EP. A compliance report, with test details, is available upon request.

## Milli-Q® Advantage A10® Water Purification System

### User-adapted ultrapure water

The Milli-Q® Advantage A10® system was designed to deliver ultrapure water adapted to every user's needs.

Using an existing source of pure water as feed, the Milli-Q® Advantage A10® system delivers high-quality ultrapure water (resistivity value: 18.2 MΩ·cm @ 25 °C; TOC ≤ 5 ppb). Two separate components – the Milli-Q® water production unit and the Q-POD® ultrapure water delivery unit – provide an ultrapure water solution adapted to today's laboratory environments.

### Features

- The Milli-Q® production unit is a compact system that can be placed either on the bench, under the bench or on a wall—wherever it best suits you.
- The Q-POD® (Quality-Point-of-Delivery) unit provides final polishing at the point of use, delivering ultrapure water adapted to specific needs. The Q-POD® interface simplifies operation and displays essential data for complete user reassurance.
- The Q-POD® unit is always within reach, and its convenient and adaptable dispensing enables the user to work both intuitively and precisely. The user can select either a very precise volume with the autofill key or manually press the plunger.
- The Q-POD® unit's multicolor graphic display allows easy interaction with the system and provides information about water quantity and quality.

### Applications

Q-POD® technology empowers you with convenient and flexible dispensing options. Up to three Q-POD® units can be used with each Milli-Q® Advantage A10® system at different locations within the same laboratory. Depending on your application, specific contaminants can affect your results. The Milli-Q® Advantage A10® system offers a unique range of final purifiers. Depending on your application, you choose the appropriate Application Pak to remove the specific contaminants that may affect your results.

For example, the Millipak® filter with the Millipore Express® membrane (0.22 μm) produces particulate and bacteria-free ultrapure water for analytical applications such as spectrophotometry, spectroscopy, and chromatography. The BioPak® ultrafilter, while removing particulates and bacteria, produces pyrogen- and nuclease-free ultrapure water for biochemical applications.

## Milli-Q® Advantage A10® System Water Specifications

### Feed Water Specifications

Parameter	Value & Unit

## Millitrack® Compliance e-Solution for Milli-Q® Advantage A10® and Milli-Q® Integral systems

The e-Solution today for the regulated lab of tomorrow

### Making compliance easy

Activation of the Millitrack® Compliance e-Solution combined with Qualification Services on our Milli-Q® systems will provide you with a ready-to-use fully-compliant water purification solution.

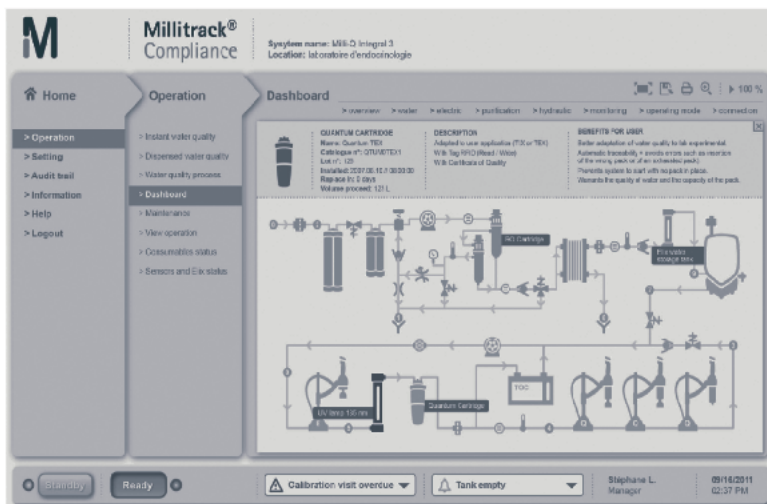

As lab water system users in regulated industries continue to move to zero-paper solutions in compliance with guidelines such as the FDA's Title 21 CFR Part 11 (or similar requirements set by other global regulatory organizations), Millitrack® Compliance provides the perfect solution for your needs.

### Optimizing productivity

At the same time, laboratory managers also need an e-solution that will facilitate daily work in the lab and optimize department productivity.

The Millitrack® Compliance e-Solution is designed to give you complete control over Milli-Q® Advantage A10® and Milli-Q® Integral water systems. Users benefit from:

- Remote monitoring with essential information at a glance
- Multiple system access from a single connection point
- Automatic data recording

- Reduced costs as there are no human errors
- Traceability of water system data
- Minimal downtime thanks to advanced diagnostics
- Easy maintenance

In response to the variety of water purification system data tracking needs that our customers may have, Merck Millipore also offers several other Millitrack® e-Solutions, including:

- Millitrack® Basic software for Milli-Q® Integral and Milli-Q® Advantage A10® systems
- Millitrack® Lite software for Milli-Q® Direct, Milli-Q® Reference, Elix® Advantage, and Elix® Reference systems
- Millitrack® Essential software for AFS®, Elix®, and RiOs™ Essential systems

These additional Millitrack® e-Solutions offer users the following key benefits:

- Less downtime:
  - Full control over your water purification system
  - Remote monitoring with essential information at a glance
  - Easy maintenance
- Increased productivity:
  - Multiple system access from a single connection point
  - Automatic data recording
  - Reduced costs due to human errors
- Facilitated accreditation:
  - Data reliability
  - Full traceability
  - Easy archiving

## Milli-Q® Direct Water Purification Systems

Pure and ultrapure water directly from tap water

The Milli-Q® Direct system is designed for ultrapure (Type 1) water needs up to 200 l/day and pure (Type 3) water needs up to 350 l/day.

From pure water, the Milli-Q® Direct system produces ultrapure water adapted to your specific applications and exceeding the requirements of the most demanding norms. Users benefit from manual and volumetric water dispense at low and high flow rate.

### Features

- Validated Progard® pretreatment cartridge extends the lifetime of the RO cartridge.
- Reject recirculation loop recycles reject water treated by the Progard® cartridge to minimize tap water use and extend Progard® lifetime, while avoiding fouling or scaling issues that might shorten the RO cartridge lifetime.
- Unique system adaptation to feed water temperature avoids flow rate decrease during the wintertime when tap water is colder.
- Unique safety device ensures that only low ionic permeate water will be sent to the tank in order to warrant adequate pure water quality and increase the lifetime of the ion-exchange cartridge used to produce ultrapure water.
- Complete process monitoring system systematically checks water temperature, pressure, conductivity and RO rejection using calibrated meters at different steps.

## Milli-Q® Reference Water Purification Systems

The reference for ultrapure water systems

The Milli-Q® Reference system delivers ultrapure (Type 1) water customized to fit a broad range of research areas, making ultrapure water conveniently available in any laboratory, regardless of space limitations or the stringency of regulatory norms.

Water is purified in a first step to reach a resistivity of 18.2 MΩ·cm at 25 °C and a TOC value below 5 ppb. This water is sent through a small recirculation loop to the Application Pak, where a final purification step removes contaminants critical for specific experiments, just before water leaves the system. Users may choose from a variety of available polishing cartridges to remove specific contaminants at the point of delivery. In addition, the Milli-Q® Reference A+ system is equipped with a TOC indicator.

### Features

- The system's volumetric function helps save time for users by providing automatic delivery of the exact water volume needed. The "arm" attached to the main unit is designed to fit the height and shape of all laboratory glassware.
- When preparing solutions, users can select the low flow function to precisely adjust the meniscus in volumetric flasks.
- A graphic screen clearly displays water quality and system status information in the language of your choice (six different languages). A Quick Reference Guide located in the door of the Milli-Q® Reference water system provides additional support for retrieving information.
- Users can save additional space by placing the Milli-Q® Reference system under the bench or by using the wall mounting bracket.

### Direct-Q® Water Purification Systems

Tap to pure and ultrapure water – with easy and convenient dispense!

Direct-Q® systems deliver both pure and ultrapure water directly from tap for use with a wide variety of applications in the lab. The range includes a number of versatile solutions designed for under bench-, bench- or wall-mounting. Systems are available with either a remote or integrated water dispenser.

A built-in 185/254 nm UV lamp reduces the levels of organics for critical applications, and also destroys bacteria. With the appropriate Application Pak, you can fine-tune your ultrapure water, and remove specific contaminants such as bacteria, particulates, pyrogens, nucleases, endocrine disruptors or volatile organic compounds.

#### Features

- Produce Type 1 ultrapure water (18.2 MΩ-cm resistivity at 25 °C and < 10 ppb Total Organic Carbon) on demand directly from potable tap water.
- Available with a built-in 185 and 254 nm UV lamp for production of low TOC water required by organic-sensitive applications.
- Produce Type 3 (Reverse Osmosis) water for basic lab applications at a flow rate of 3, 5, or 8 liters per hour at 15 °C. Type 3 water is easily available from the 6 l built-in reservoir, or the external 30/60 l reservoirs.
- Maintenance reduced to a single cartridge change once or twice a year.
- Ideal for laboratories that do not have easy access to pretreated water and need between 1 and 10 l of ultrapure water per day.
- Alarm warning in case of a sudden drop in the quality of the product water.
- Dispensing adapted to different size laboratory glassware.
- Time-saving fixed volume dispense.

### Synergy® Water Purification Systems

Ultrapure water at the point of use – with easy and convenient dispense!

The Synergy® systems are designed for ultrapure (Type 1) water needs up to 100 l/day for laboratories that already have access to purified water and need a point-of-use system to supply high quality ultrapure water at more than 1.5 l/minute. The systems' compact design, along with the versatile remote dispenser, ensures easy installation anywhere in your laboratory, either on the bench or wall-mounted.

For applications requiring very low organic contaminant levels, the Synergy® UV system also incorporates a dual wavelength UV lamp to produce water with < 5 ppb TOC (when feed water TOC is below 50 ppb), making it suitable for HPLC, GC, IC and TOC analyses.

With the Application Pak cartridge of your choice as a final filter, Synergy® systems produce ultrapure water free of pyrogens, nucleases, proteases, VOCs, trace organics, or endocrine disruptors to meet your specific needs.

#### Features

- Produce Type 1 water (18.2 MΩ-cm at 25 °C ultrapure water) on demand from pretreated water (reverse osmosis or demineralized water).
- Maintenance reduced to a single cartridge change once or twice a year, depending on the volume produced and the quality of the pure water feed.
- System designed for users needing between 2 and 100 liters of ultrapure water per day with instant flow rate of 1.5 l/min.
- Quality suitable for HPLC and other spectrophotometric/ spectroscopic analytical techniques for biological, biochemical, and cell culture applications.
- Dispensing adapted to different size laboratory glassware.
- Time-saving fixed-volume dispense.

## Simplicity® Water Purification Systems

Ultrapure water on demand wherever you need it!

The Simplicity® system is designed to produce ultrapure (Type 1) water from pure water for users who need up to 5 l/day, thus economically replacing ultrapure bottled water. A portable, personal ultrapure water purification system, the Simplicity® can be located anywhere in your laboratory. It requires no special installation, no feed water connection and produces ultrapure water on demand from pretreated water. An intuitive color graphic display shows key system parameters at a glance, enabling easy water quality and maintenance warning monitoring.

The Simplicity® UV system also incorporates a dual wavelength 185/254 nm UV lamp to produce water with < 5 ppb TOC (when feed water is below 50 ppb), making it suitable for HPLC, GC, ILC and TOC analyses. Systems are delivered with a Quick Reference Guide for an easy and fast understanding of operational functionality.

### Features

- Produces Type 1 ultrapure water (18.2 MΩ·cm resistivity at 25 °C) on demand from pretreated water (reverse osmosis, distilled or deionized water).
- Compact and portable "nomadic" system requires no plumbing. The Simplicity® system can easily be installed where you need it on your lab bench – and just as easily moved to another location within your lab or elsewhere if necessary.
- The system draws water from a removable, refillable, built-in reservoir, eliminating the need for carboys.
- Flow rate > 0.5 l/min.
- Maintenance reduced to a single cartridge change when needed, based on the resistivity value displayed for the ultrapure water produced.
- Systems designed for users needing between 1 and 5 liters of ultrapure water per day with instant flow rate of 0.5 l/min.
- System comes with or without a UV lamp (depending on the impact of TOC on applications).
- Alarm function in the event of a sudden drop in the quality of the product water guarantees your water quality at all times.
- Dispensing adapted to different size laboratory glassware.

## Super-Q® Water Purification System

Reagent-grade water purification system producing up to 12 l/min of Type 1 ultrapure water

The Super-Q® System is a high-flow water system designed to provide the "final polish" to water that has been pretreated by reverse osmosis, distillation or deionization. Super-Q® systems consistently produce ultrapure water quality that exceeds Type 1 ASTM®/CAP/CLSI® specifications.

The Super-Q® water system features a modular design for the production of ultrapure water, as well as automatic recirculation of water on an hourly basis to maintain water quality between uses.

Because Super-Q® product water is produced "on demand", there is no need to store water and risk degrading water quality over time.

### Features

- Produces up to 12 l per minute of ultrapure water with a resistivity of 18 MΩ·cm at 25 °C and TOC < 20 ppb.
- Cartridges used in the system have a thermoplastically welded construction, which avoids the use of glues and solvents that can contribute to high TOC (Total Organic Carbon) levels in product water.
- Deionization resin used in the system's purification cartridges is selected to respond to criteria requiring high ion-exchange capacity and rapid rinse-up, as well as low extractable (TOC and particulate levels).
- When not in use, the system can be set on "Standby" allowing the pump to automatically recirculate the water for five minutes every 90 minutes, thus maintaining high water quality between uses.

### Elix® Advantage Water Purification Systems

The best in pure water at your fingertips

The Elix® Advantage system is the first choice of scientists around the world for producing Type 2 pure water in both validated and non-validated environments.

Equipped with the second generation of patented Elix® EDI technology, the Elix® Advantage system produces consistently high-quality pure water at low and predictable running costs.

The ergonomic and versatile E-POD® (Elix® water Point-of-Delivery) dispensers let you benefit comfortably from efficient and reliable pure water delivery, where you need it, when you need it.

Validation services are available for your Elix® Advantage system.

#### Features

- Constant and reliable Type 2 pure water from potable tap water (up to 360 l/day), thanks to complementary water purification techniques, including state-of-the-art Elix® electrodeionization technology.
- Water produced by the systems, with resistivity > 5 MΩ·cm at 25 °C (typically 10–15 MΩ·cm) and TOC < 30 ppb, meets the specifications for your applications.
- Low and predictable running costs, with the self-regenerating Elix® electrodeionization module.
- Up to three E-POD® pure water dispensers can be connected to each Elix® Advantage system, giving you flexibility in water quality needs and lab organization.
- Convenient E-POD® unit(s) provides manual or automatic pure water dispense; high or low water flow (up to 2 l/min) to suit your needs and save time.
- By adding the appropriate E-POD® dispenser Application Pak, pure water can be fine-tuned at dispense to provide organic- and particulate-free\* or pyrogen- and nuclease-free\* water (\* see water quality table).

- High-precision monitoring equipment measures key water quality parameters.
- Intuitive system controls allow access to different levels of system information (regular use, maintenance, system management).
- Maintenance procedures are easy and straightforward. RFID technology enables automatic traceability.
- Validation support for your Elix® Advantage system can be provided by trained Merck Millipore Field Service Support Engineers using calibrated equipment and Qualification Workbooks.
- Compliance with the highest Quality Assurance demands. Systems are delivered with a Certificate of Conformity and a Certificate of Calibration for built-in meters; consumables are delivered with a Certificate of Quality.
- When activated, Millitrack® Lite software allows access to an electronic logbook and real-time dashboard, and also provides full traceability and remote monitoring capabilities.

#### Applications

The pure water from the Elix® system can be used for laboratory applications such as reagent and buffer preparation, microbiology media preparation, histology applications, purified water for pharmaceutical applications (according to US, Japanese and European Pharmacopeias), and feed for laboratory equipment (washing machines, clinical analyzers, stability chambers, humidifiers, autoclaves, and weatherometers).

Elix® water is recommended as feed water for all ultrapure water purification systems.

#### Elix® Advantage System Water Specifications

The Elix® Advantage system is designed to meet or exceed requirements as described by ISO® 3696 (Grade 2 water); ASTM® D1193 (Type II resistivity and TOC Table I specifications); and by the United States, European and Japanese Pharmacopeias for Purified Water.

## Elix® Essential Water Purification Systems

Consistently pure, reliable water quality for optimal results

The Elix® Essential system is ideal for laboratories needing an economical and user-friendly Type 2 pure water solution.

Patented Elix® EDI technology is combined with complementary water purification techniques, including Progard® pretreatment and reverse osmosis, to produce consistently pure and reliable quality water.

With no resin packs to change and no softener required, the self-regenerating Elix® EDI module lowers running costs.

### Features

- Constant and reliable Type 2 pure water from potable tap water (up to 360 l/day) thanks to complementary water purification techniques, including state-of-the-art Elix® electrodeionization technology.
- Water produced by the systems, with resistivity > 5 MΩ-cm at 25 °C (typically 10–15 MΩ-cm) and TOC < 30 ppb, meets the specifications for your applications.
- Low and predictable running costs, with the self-regenerating Elix® electrodeionization module.
- Intuitive system controls, with system alert and alarm icons shown on a color-coded backlit LCD display.
- Small system footprint enables the best use of the laboratory space.
- Maintenance procedures are easy and straightforward. RFID technology enables automatic traceability.
- When activated, Millitrack® Essential software allows access to an electronic logbook and real-time dashboard, and also provides full traceability and remote monitoring capabilities.

## Large Elix® Water Purification Systems

In addition, Merck Millipore has developed Elix® systems for users requiring larger volumes of Type 2 analytical-grade water, ranging from several hundred to several thousand liters per day. These larger Elix® systems can be integrated into a centralized system and can control all accessories in the distribution loop, serving as the "nerve-center" for the total water purification chain.

### RiOs-DI® Water Purification Systems

Affordable RO-DI pure water solutions

RiOs-DI® systems provide users with a compact solution ideal for low-volume pure water laboratory applications.

The unique, simple "plug-and-use" purification pack enables the production of high quality (> 10 MΩ-cm and < 30 ppb TOC) water from tap water.

The systems have a compact and user-friendly design to make the most efficient use of lab space.

#### Features

- Combining Reverse Osmosis and Deionization, RiOs-DI® systems remove all types of water contaminants (typically > 99%).
- The built-in 254 nm UV lamp\* is ideal for applications that require low bacteria levels.
- The consumable is a unique "all-in-one" pack that includes the pretreatment, reverse osmosis membrane and ion-exchange resin.
- Maintenance is reduced to the quick change of a single cartridge.
- Backlit color display shows resistivity and temperature values, water level in reservoir, and alarms if necessary.
- Integrated, compact 6-liter reservoir; unique flow rate of 3 l/h, typical daily production up to 15 l.

\*This system is also available without a UV lamp.

### Milli-DI® Water Purification Systems

The Deionized water solution for basic laboratory needs

The Milli-DI® system is a compact and easy-to-use water purification system that instantly provides deionized water (resistivity > 1 MΩ-cm) directly from tap water.

Suitable for users requiring low volumes of purified water (3 to 5 l/day), this battery-powered system comes with everything needed for easy installation in the lab (includes tubing for 1/2" tap fitting).

Operation and maintenance of the Milli-DI® system is simple: the DI-PAK® purification pack can be easily snapped in and out in seconds without risk of leakage.

#### Features

- Simple installation: battery-powered with no need for electric outlet.
- Complete purification sequence (removal of ions, bacteria and organics).
- Built-in resistivity meter for easy control of water quality.
- Compact and easy-to-use.
- Easy maintenance – purification packs can be changed in seconds.
- Optional 0.22 µm filter produces bacteria-free water.

## RiOs™ Essential Water Purification Systems

A consistent, user-friendly RO pure water solution

RiOs™ Essential systems are ideal for laboratories needing constant production of Type 3 pure water up to 480 l/day. The RiOs™ Essential solution integrates pretreatment and high-performance reverse osmosis (RO) membranes.

Robust RiOs™ Essential systems require very little maintenance thanks to established RO technology and automatic RO self-maintenance functions.

### Features

- Consistent production of Type 3 (RO) pure water with temperature compensation to ensure dependable and constant flow rates from 5 to 24 liters per hour.
- Advanced reverse osmosis technology with high level recovery loop reduces water consumption by 50% or more.
- Intuitive system controls, with system alert and alarm icons shown on a color-coded backlit LCD display.
- Automatic RO self-maintenance functions.
- Ergonomic pack locking system makes Progard® pack changes a snap!
- RFID technology for traceability of Progard® pretreatment packs.
- Small system footprint, allowing multiple installation possibilities.
- When activated, Millitrack® Essential software allows access to an electronic logbook and real-time dashboard, and also provides full traceability and remote monitoring capabilities.

## RiOs™ Water Purification Systems

Affordable RO pure water solutions

RiOs™ systems are suitable for general, non-critical laboratory applications and provide an ideal solution for Type 3 laboratory-grade water needs.

The systems have a compact and user-friendly design to make the most efficient use of lab space.

### Features

- Systems produce affordable Type 3 water from tap, up to 190 l per day.
- Systems are available with flow rates of 3, 5, or 8 liters per hour to match users' volume needs.
- Efficient removal of > 96% of ionic contaminants and > 99% of other contaminants (organics with MW > 200, bacteria, particles).
- Unique, all-in-one purification cartridge includes pretreatment and the reverse osmosis membrane.
- Maintenance is reduced to the change of a single cartridge once or twice a year.
- Backlit color display shows conductivity and temperature values, water level in reservoir, and alarms if necessary.
- Integrated, compact 6-liter reservoir (RiOs™ 3); connection to a 30 l or 60 l reservoir is possible for higher daily needs.

### Large RiOs™ Water Purification Systems

In addition, Merck Millipore has developed large RiOs™ systems designed to produce up to 8,000 l/day of Type 3 laboratory-grade water from potable water. These systems can be integrated into a centralized system, providing total control of all parameters within the system itself, as well as within the external pure water distribution loop.

With the latest technologies incorporated in these RiOs™ systems, customers benefit from lower running costs and easier maintenance.

## Merck Millipore Custom Installations

Lab water system for a large laboratory or laboratory building (water needs up to 10,000 L/day)

Designing a new lab water system or retrofitting an existing system requires a thorough understanding and working knowledge of common and emerging contaminants, purification technologies, industry standards, user requirements and water distribution options. Selecting the purification technologies, materials, design and installation configurations best-suited to individual user and departmental needs throughout the facility can be a daunting task. Further complicating the design of a lab water system are usage patterns and purity requirements that can vary widely among labs, floors, and departments within a single facility.

Example of a custom installation on several floors, including some specific point-of-use systems

In planning a water distribution loop that will meet desired water quality and water requirements such as flow rate and pressure needs, Merck Millipore has the engineering expertise to determine the adequate water purification equipment and pump size, based on calculated piping and equipment pressure losses. For example, to maintain optimal microbiological water quality, Merck Millipore ensures that minimum flow velocity throughout the distribution loop will be achieved, and also follows strict design guidelines, such as avoiding piping dead-legs.

At Merck Millipore, we offer a complete range of water purification systems designed to match the needs of small- through large-volume applications. Compatible with any laboratory usage, these systems are economical, easy to use, save water and improve productivity and results.

### Total Pure Water Solutions

Merck Millipore is the partner of choice for total water purification systems – from conception and design through to engineering expertise and technical support services. Merck Millipore works together with end-user scientists, architects, consultants, lab managers, facilities managers, contractors and equipment suppliers throughout a project to meet customers' specific requirements.

### Total Performance

Determining the specific requirements for a laboratory, a suite of laboratories or an entire laboratory building is often the most difficult part of the project. From the earliest stages, Merck Millipore professionals work with all parties, providing advice on key parameters such as water quality and quantity, standards that must be adhered to and considerations for long-term laboratory use.

### Total Expertise

Merck Millipore provides the expertise throughout the project to ensure that all components are designed and implemented according to strict guidelines – assuring users that the total water purification system will meet the expected performance levels.

### Partnership

The partnership begins with each customer defining their own specific needs: the quality and quantities of water required, practical considerations and requirements for regulatory standards.

### Design

Merck Millipore can provide a specific configuration for a particular design or several options to meet the demands of regulatory bodies as well as valuable advice on choosing the best design to meet customer needs.

### Installation

Merck Millipore can provide the systems and all the necessary components and materials to perform the installation.

### Support

For complete peace of mind, Merck Millipore offers a full range of services for your water purification system that includes maintenance programs, telephone technical support, field service visits, application and scientific support, as well as comprehensive Installation Qualification (IQ) and Operational Qualification (OQ) support.

## Merck Millipore Lab Water Systems for Automatic Instrument Feed (Clinical Analyzers)

Of all the fluidic reagents needed onboard an analyzer, water is the most frequently used. Purified water is employed extensively in biomedical laboratories, in a wide variety of applications ranging from General Chemistry to Enzyme Immunoassays, including Toxicology, Trace Elements analysis, and Molecular testing assays. For each assay, different types of contaminants may interfere with the analysis and alter the test results.

Merck Millipore offers a complete range of water purification systems designed to produce consistent water quality, and which follow the guidelines of the Clinical and Laboratory Standards Institute, Inc. (CLSI®) for Clinical Laboratory Reagent Water (CLRW):

- Resistivity > 10 MΩ·cm @ 25 °C
- Bacteria level < 10 cfu/ml
- Total Organic Carbon (TOC) < 500 ppb
- 0.22 µm filtration

### RiOs-DI® Clinical Water Purification Systems

Consistent and reliable purified water for low-volume clinical analyzers using up to 20 l daily

#### Features

- Efficiently combines reverse osmosis (RO) technology with deionization (DI) resins to produce CLSI® SRW (Special Reagent Water).
- Produces water with a flow rate of 3 l/h in an integrated 6 l reservoir.
- Provides an efficient alternative to buying and storing bottled water.
- Economical and compact system allows substantial cost savings.
- Eliminates the need to constantly manually refill pure water reservoirs or storage tanks.
- Consumable cartridges snap in and out without the use of tools.

### AFS® 10E and 15E Water Purification Systems

Incorporating Elix® technology economical and reliable water purification systems for analyzers with pure water needs up to 300 l daily

#### Features

- Produce water with flow rates of 10 and 15 l/h respectively, up to 300 l daily.
- Combine Merck Millipore's state-of-the-art Elix® electrodeionization (EDI) technology with other complementary water purification techniques.
- Designed to be in compliance with CLSI® CLRW quantitative specifications.
- Fit any lab and can be mounted on a bench, wall, or cart.

### Elix® Gulfstream Clinical Water Purification Systems

All-in-one water purification system for clinical analyzers with pure water needs of up to 2,000 l daily

#### Features

- Designed to be in compliance with CLSI® CLRW quantitative specifications.
- "All-in-one" solution on wheels saves space, and allows easy installation and mobility.
- Patented, proven Elix® electrodeionization (EDI) technology provides consistent water quality, with low and predictable running costs.
- Robust system that requires little maintenance.
- Small footprint.

# Create Peptides without Restrain.

For nearly 30 years, the Novabiochem® brand has offered innovative reagents of unparalleled quality for peptide synthesis and high-throughput organic chemistry. Our extensive range includes more than 1,000 products, such as Boc and Fmoc amino acids, pseudoproline and Dmb-dipeptides, Wang and Rink resins, as well as COMU®\*, HATU, HBTU, PyBOP, and PyOxim coupling reagents.

\* COMU is a registered trademark of Luxembourg Bio Technologies Ltd., Israel

## Safety accessories for bottles

1.08801.0001

Bottle key for opening and closing bottles with S 40 and S 28 screw caps

1.09996.0001

Adapter S 40, e.g. for direct connection to HPLC instruments

1.03830.0001

HPLC bottle adapter with 3 tube connections ID 3.2 mm, solvents supply by Merck-bottles

1.03831.0001

HPLC bottle adapter S 40 with 3 tube connections for solvents disposal (exhaust air filter not included)

1.03832.0001

Air valve for HPLC bottle adapter S 40

1.03833.0001

Exhaust air filter for HPLC bottle adapter S 40, disposal

1.03834.0001

Fittings for capillaries with 3.2 mm OD (pack of 10)

1.03835.0001

PTFE-ferrule for capillaries with 3.2 mm OD (pack of 10)

1.03836.0001

Blanking plugs (pack of 10)

1.00801.0001

Label set acc. to GHS with 20 blank adhesive labels, adhesive pictograms and signal words

Safety carriers for Merck Millipore glass bottles

## Safety accessories for barrels and drums

**1.08803.0001**  
Drum & barrel key

**9.67100.9004**  
Pressure safety device

**9.67100.9100**  
Pressure reducer  
with integrated overpressure relief

**1.07070.0001**  
Antistatic device  
(3 cables in box)

**9.67106.0001**  
Stainless steel clamp for filling nozzle  
attachment to drums

**9.67107.0001**  
Stainless steel clamp for filling  
nozzle attachment to walls

## Withdrawal systems for barrels and drums

**1.01114.0001**  
Withdrawal system  
for 10 l and 25 l stainless steel drums

**1.01123.0001**  
Withdrawal system  
for 10 l and 30 l stainless steel barrels

**1.06710.0001**  
Withdrawal system for stainless steel  
drums and barrels with inert gas  
pressurizing (dip tube orderable  
additionally)

**1.19171.0001**  
Withdrawal system for solvents with  
manual pressure build-up for 200 l  
drums and barrels

Threaded adapters

**9.67100.9002**  
Threaded adapter (vertical connectors)

**9.67100.9003**  
Threaded adapter (horizontal connectors)

Filling nozzles and taps

**9.67100.9090**  
Filling nozzle with tubing

**9.67100.1090**  
Filling nozzle

**9.67100.1084**  
Filling nozzle for wall attachment

**1.09070.0001**  
Tap for withdrawal  
out of horizontal containers

Tubings

**9.67100.9051**  
Gas feeding tube

Stainless steel coated teflon tubings  
with several connectors  
(special lengths on request)

## Dip tubes

Dip tube  
for stainless steel barrels and drums  
for 2" threaded adapter

**9.67100.1026**  
Dip tube for combi containers

## Level sensors

**9.67100.2001**  
Level sensor for bottles  
(solvent supply)

**9.67100.2004**  
Display for bottle level sensors

Level Sensor System for continuous level  
detection incl. graphical display with  
optical and audible signal

## Adapters and reducers

**1.01111.0001**  
Reducer  
2 inch to S 40

**9.67100.1052**  
Coupling (female) with tube connection

**9.67100.1061**  
Nipple (male) with tube connection

## Spare parts and optional products

**9.67100.1079**  
Pump ball with quick connector

O-Ring sealing

Concentration after dilution to 0.5 liter: c(CH<sub>3</sub>COOH) = 1 mol/l  
 Amount-of-substance concentration ... 1.000 mol/l  
 The concentration of this solution was determined with sodium hydroxide standard solution (Merck article number 1.09137) standardized by hydrochloric acid against volumetric standard Tris(hydroxymethyl)aminomethane (Merck article number 1.02408). The determined titer at 20 °C

was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 723e (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Tris(hydroxymethyl)aminomethane, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur). Amount-of-substance concentration .0.1000 mol/l The concentration of this volumetric solution was determined with volumetric standard Iron(II) ethylenediammonium sulfate (Merck article number 1.02402). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of +/-0.003 (k=2 coverage factor for 95% coverage

probability). The certified value is traceable to primary standard NIST SRM 8040 (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard Iron(II)-ethylenediammonium sulfate measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

The concentration of this solution was determined with volumetric standard potassium dichromate (Merck article number 1.02403). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The

certified value is traceable to primary standard NIST SRM 136f (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium dichromate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/IEC 17025.

Volumetric solution in accordance to the chapter reagents of the Pharmacopoeia (Ph Eur, USP).  
Amount-of-substance concentration . 0.1000 mol/l

The concentration of this volumetric solution was determined with silver nitrate standard solution (Merck article number 1.09081) standardized against volumetric standard sodium chloride (Merck article number 1.02406). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of +/-0.003 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard

NIST SRM 999b (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard sodium chloride, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

- HS-No. 2842 90 80 ■ Disposal 28

**Specification**

Concentration after dilution to 1 liter: (NH<sub>4</sub>SCN) = 0.1 mol/l  
Amount-of-substance concentration . 0.1000 mol/l

Determination method: Argentometric titration.  
The concentration of this solution was determined with silver nitrate standard solution (Merck article number 1.09081) standardized against volumetric standard sodium chloride (Merck article number 1.02406). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 999b (NIST: National

Institute of Standards and Technology, USA) by means of volumetric standard sodium chloride, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

**Specification**

Concentration after dilution to 1 liter: c(BaCl) = 0.05 mol/l  
Amount-of-substance concentration 0.05000 mol/l  
Determination method: Complexometric titration.  
The concentration of this solution was determined by back-titration with copper(II) nitrate (Merck article number 1.02753) standardized by titriplex(III) solution (Merck article number 1.08431) against volumetric standard zinc (Merck article number 1.02409). The determined titer at 20 °C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for

95% coverage probability). The certified value is traceable to primary standard NIST SRM 682 (NIST: National Institute of Standards and Technology, USA) by means of volumetric standard zinc measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

## Specification

Concentration after dilution to 1 liter: c(Br<sub>2</sub>) = 0.05 mol/l

Amount-of-substance concentration 0.05000 mol/l  
 The concentration of this solution was determined with sodium thiosulfate standard solution (Merck article number 1.09147) standardized against volumetric standard potassium iodate (Merck article number 1.02404). The determined titer at 20°C was 1.000 with an expanded measurement uncertainty of ± 0.004 (k=2 coverage factor for 95% coverage probability). The certified value is traceable to primary standard NIST SRM 136f

(NIST: National Institute of Standards and Technology, USA) by means of volumetric standard potassium iodate, measured in the accredited calibration laboratory of Merck KGaA in accordance to DIN EN ISO/EC 17025.

## 841720 4-Bromobutyronitrile for synthesis

C<sub>4</sub>H<sub>5</sub>BrN  
 ■ CAS-No. 5332-06-9 ■ EC-No. 226-236-6  
 ■ Spec. density 1.491 g/cm<sup>3</sup> (20 °C)  
 ■ Flash point 103 °C ■ M = 148 g/mol  
 ■ Boiling point 204 - 206 °C

■ WGK 3  
 ■ LGK 10 ■ Store below +15°C.  
 ■ HS-No. 2926 90 95 ■ Disposal 3  
 ■ ADR-RID UN 3276 Nitrile, flüssig, giftig, n.a.g.(4-BROMBUTYRONITRIL), 6.1, III ■ IMDG-Code UN 3276 NITRILES, TOXIC, LIQUID, N.O.S.(4-BROMOBUTYRONITRILE), 6.1, III  
 ■ IATA-DGR UN 3276 NITRILES, LIQUID, TOXIC,

N.O.S.(4-BROMOBUTYRONITRILE), 6.1, III

**820191 1-Bromo-2-chlorobenzene for synthesis** C<sub>6</sub>H<sub>4</sub>BrCl1-(Br)-2-(Cl)C<sub>6</sub>H<sub>4</sub>

- CAS-No. 694-80-4 ■ EC-No. 211-775-1
- Refractive index 1.5809 (20 °C, 589 nm)
- Spec. density 1.65 g/cm<sup>3</sup> (20 °C)

- Flash point 70 °C ■ Solub. in H<sub>2</sub>O 0.045 g/l (25 °C) ■ M = 191.45 g/mol ■ Melting point -12.3 °C ■ Boiling point 203 - 205 °C

- WGK 3
- GHS: Warning, Skin irritation, Category 2, H315; Eye irritation, Category 2, H319, P302 + P352, P305 + P351 + P338
- LGK 10 - 13
- HS-No. 2903 99 90 ■ Disposal 3

**Specification**

**801674 1-Bromo-3-chlorobenzene for synthesis** C<sub>6</sub>H<sub>4</sub>BrCl1-(Br)-3-(Cl)C<sub>6</sub>H<sub>4</sub>

- CAS-No. 108-37-2 ■ EC-No. 203-575-8
- Refractive index 1.5771 (20 °C, 589 nm)

- Spec. density 1.63 g/cm<sup>3</sup> (20 °C)
- Flash point 80 °C ■ Solub. in H<sub>2</sub>O (20 °C) practically insoluble ■ M = 191.45 g/mol ■ Boiling point 195 - 197 °C

- WGK 3
- GHS: Warning, Skin irritation, Category 2, H315; Eye irritation, Category 2, H319, P302 + P352, P305 + P351 + P338

**821969 1-Bromo-4-chlorobenzene for synthesis**C<sub>6</sub>H<sub>4</sub>BrCl1-(Br)-4-(Cl)C<sub>6</sub>H<sub>4</sub>

- CAS-No. 106-39-8 ■ EC-No. 203-392-3
- Spec. density (20 °C) not applicable
- Flash point < 100 °C ■ Solub. in H<sub>2</sub>O 0.045 g/l

- (25 °C) ■ M = 191.45 g/mol ■ pH value (H<sub>2</sub>O, 20 °C) not applicable
- Saturation conc. (20 °C) Air, not applicable
- Melting point 64 - 67 °C ■ Bulk density 900 kg/m<sup>3</sup> ■ Boiling point 196 °C (1013 hPa)

- WGK 3
- LGK 10 - 13
- HS-No. 2903 99 90

**Specification**

Assay (GC, area%)..... ≥ 98,0 % (a/a)  
 Melting range (lower value)..... ≥ 64 °C
